PREVENTIVE STRATEGIES – “RUSSIA INSIDE RUSSIA”

PREVENTIVE STRATEGY IN FINANCIAL SPHERE

RI CPS

Moscow

2013.08.23

THE CONCEPTUAL PURPOSE OF PREVENTIVE STRATEGIES:

To put on “Beginning of The Beginnings” to the process of forming strategic and fundamental basics of a new Construction of people’s organized human being. The main aim of the process is to provide transition of people’s human being to another way of Civilization development by imputing elements of influencing management “from the outside”.

1. Causative conceptual basis:

The theory “Basis of Humankind Forming” presents some objective judgments of true causal character, which prove an inevitable historical collapse of the both modern Human Civilization types: communist and capitalist. This collapse substantiates something more than causal necessity of forming another Target’s Vector of all modern Human society’s executive actions, objectification of a new general event-driven chrono-process towards transition to another way of the Earth’s Civilization of thinking orientation development, building and innovation arrangement of a Construction for setting up and management of socially righteous and creative peoples’ Human Being – Humankind.

Proxperation of the all indicated above has an important distinguishing feature, as follows: it is related to and targeted on acquisition of a mandatory general harmony with all nowadays occurring changes in the basis construction of the Earth’s energy being, strictly observing the tact of eventual timing with respect to common transformations. In fact – it is a separately marked stage to start recreation of Earth’s true telic and imputing development state functions, destructed before, including process of Human’s recreation like a verily Homo sapiens with his essential significance as an integral element of the Earth’s civilizational development in whole. The Earth here is a control and guided System at the same time.

It is a process’s restoration of a Thinking orientation Civilization development on the Mother Earth, which rules out any vices, such as based on social injustice, parasitism and violence of minority over prevailing majority on the scale of the world society, telic destructive life choice, trade and consumer masterful revenge instead of righteous upcoming creation, unmerited national and regional parasitizing nihilism and other vicious hegemonies of before imputed violence in any form of its demonstration.

Undoubtedly this stage of a new historical and civilized development by its strictly required functional framework for all involved participating elements and systems, predetermined by the Target’s Vector, not only envisages, but also imputes bindingness in

acquisition of active performing peoples' states during this so important period of general event-driven chrono-process's changing. At all episodes of future performing actions with participation of peoples involved groups and also on the way of nowadays manifested elements' objectification of obligatory changes in guidance Construction of all spheres of human being, please note: "heavenly god-sends" will not be! All, that had been laid down by circs and received from regained results of current external changes in guided surrounding reality, all that will require adequate and principal changes in everyday people's being. That means that all indicated above should be done by the peoples themselves. But it should be done on the basis of another judgment regarding people's role and mission in the ongoing creative processes, relied on higher level of verity cognition about "The World Created" represented by reconstructed System!

Acknowledgement of society consisted of people as a "Humankind" will be performed only through control from outside according to the people's perception of their mission on the Earth; through their conscious accepting of active participation functions in performing actions concerning irreversible man-made processes in Construction of social code of their being; and also through conscious useful partnership concerning all occurring changes both in dwelling conditions, and in manageable environment.

This will thoroughly change the former stronghold of the old philosophical approach to the essence of any judgment, relating to ideas' formulation about social and individual Consciousness as an essential and integral part of the true world outlook, as a basic foundation for everyday and practical executive actions. People's obtaining of another states of consciousness, relied, in its basis, on another level of verity cognition, will impute new elements into handmade Construction of organized human being, ensuring social justice of a creative cohabitation and acquisition of a real and upcoming harmony between human being and the Earth's energies being.

Since 25th of October of 1984 the recreated Earth's Guidance System has carried out a number of "structural" activities and processes, directed on true states of energy being's restoration concerning the all Cluster model of the Earth. On a field day, namely on April 24 of 2011 the act of System power changing was carried out completely. This is a really universally scaled event – elimination of intervention on the Mother Earth! Automatically flowing part of remaining events in all spheres of destructive organized human being, associated with consequences' liquidation of System interventional Mind's interference as well as partial replacement of conserved fragmentary elements of the former guidance onto more sophisticated and "native", they are carrying out in a harmony with objectification of basic evolutionary and

restoration transformations in all constructions and states of the Earth's energy being and in their control, what happens during 2012 – 2024 years (Transition period).

Thereby the new Guidance System objectifies the liquidation process of a basis foundation concerning the “Social Violence” Control System as a System which was imputed at one time into the Construction of organized human being and providing earlier parasitism of inconsequential minority over predominant majority. The complex control process touching the people's executive activity is under technical liquidation now and this liquidation is carried out through elimination of the former energy informative accomplishment realized earlier via interventionist control systems, objectives and servers (habitat) and through elimination of the imputed energy grids' constructions replacing them with “native” within octaves from 15 up to 128 (changes in the managed environment).

3. The phenomena, actions and events Target's Vector objectification

It is an important and decisive moment now, the moment of the own future determination. What can be done and should be done by the people themselves through their active participation in everyday life against handmade part of imputed Construction of organized human being? The answer is as follow. The people's executive practical steps should be objectified in the framework of [Target's Vector of phenomena, actions and events](#), predestined for them during Transition period and beyond.

3.1 Phenomenon

Phenomenon, as a software information base for organization of all future peoples' executive actions in their transition way to a different path of civilized development, is presented in a [New Doctrine of transition to another World Order](#). Main provisions are as follow:

An active and participant state of nowadays people's human being is carried out through pursuing the new historical Doctrine. It's the Doctrine's execution will allow the people, in their everyday life, to build a new [World Order](#), what is not based on a violence in cohabitation. That in turn will ensure to build new but true everyday software based civilized life order following the way of Thinking orientation, which had been earlier imputed for the Earth to all stages of Her genuine and perfect being.

The basic processes of active executive people's activity, which is directly related to changing some existing elements of the “gunboat World Order”, are strictly fallen within the framework of a strongly marked geographical area, and this area is newly appointed one as a viability accompanying space. Such area was endured by a restored new Earth's Guidance

System, which takes into account a new functional living allotment given to any society, selected from groups of people to be integrated into the Future, with the aim to provide them a choice and self-determination in acquisition of active and participated status in their future life arrangement. And that will give the people a possibility to find harmony in the overall ongoing process towards recreation of a new way of existence, oriented on progress of a new but true Civilization on the Mother Earth.

The appointed geographical area covers: the most part of the South-East Asia, the territory of Russia with part of Arctic, some limited part of the South Europe, the west coast of Latin America and the Antarctic zone. The exact shape of these geographical areas is known. The areas control software servers are activated. The start process for the areas to be established was switched on by Altay Managing Complex in 2012.11.23.

All basis, regarding elements' imputation into Construction of a new organized people's human being as a form of executive activity and an integral part of event-driven processes ensuring people life preservation in interests of their participation in these event-driven processes, connected with transition to another way of Civilization's development (Humankind), are oriented on demand perception to objectify the model of a new World Order precisely in this specified area. As groundwork for the public consciousness, to be established inside groups of people in the most part of countries of this area, is a new historical (event-driven) Doctrine of a new World Order building, and it is the way of these groups' evolutionary development. An attendant energy and informational translation began in 2013.05.08. This translation was carried out by Managing Servers with the aim to form necessary social people's consciousness and now covers the territory of the South-East Asia and Western coast of Latin America, and it's the first stage only. Subsequent stages of informational translation covering other geographical areas of a new living space are defined and their accomplishment are laid down into the tact of event-driven timing which envisages then some practical level of people's preparedness to accept such information in order to develop their social Consciousness up to the status which will be reclaimed for people's practical executive actions, directed to begin transition to another evolution way.

The main Vector of the true essence of a new Doctrine is focused on:

All preserved people in the territory of the living accompanying space should be released from Britain-American-European event "depressing benefit" of parasitizing system called "Market of Comprehensive Violence", which had imputed from the outside the destroying hegemony of unessential and self-proclaimed minority, leading to social parasitism over majority of the most part of indigenous peoples. This "market" was imposed for the indigenous peoples through three types of arranged fascism: financial fascism, national-demographic fascism and

bureaucratic-clannish fascism. Besides the “market” was imposed through technological and raw-staff quitrent, as well as through military force pressure. And all these imposed violent “measures” eliminated any responsibility for consequences of majority’s hopeless life being and lack of independency in choosing the ways of their own regional development.

And what is “[The Beginning of the Beginnings](#)” of these changes? This is a make or brake issue for the whole community of people in the world that can be integrated into the future. To understand this we were connived to give light and represent a number of [Preventive strategies as a program for future people’s executive actions](#). Their fulfillment will ensure the people to obtain a different but harmonious way of their civilized development and find exit from some historical deadlock, which was imputed for the people like basic gunboat foundation for their existence in line with liquidation violence and self-destruction in the end.

[The economic, organizational and spiritual basis of the new Doctrine](#), as a new event-driven process, are [Preventive Strategies](#), related to a new system Target’s Vector of future phenomena, actions and events, laid down on the basis of new people’s executive actions in the indicated area as a new living space. By the way of these actions implementation a transition’s beginning of another way of Civilization’s development will start:

- [Destruction of an artificially imposed Britain-American-European illusion](#) regarding historical inevitability of their civilizational superiority over overwhelming majority of whole people’s community on the Mother Earth, as it is a resulting atavism of the former social parasitizing of so called civilized development under the governance of gunboat Control System, which was liquidated in 2011.04.24;

- [Unconditional rejection of Britain-American-European technologies](#), which have a destructive character and are not answerable to processes of ongoing changes in a new manageable energies’ being on the Earth, which are draining the regional non-renewable natural resources in areas of new functional and territorial empowerment, which are breaking down the harmony of controlled environment being, which lead to irreversible regional ecological catastrophes and inevitable people’s liquidation together with the whole zonal biological sphere;

- [Transition to a new technological groundwork](#), based on another level of verity cognition about the “World Created”, which provides imputing a new own zonal innovative scientific and technological platform of creative empowerment, which determines [zero waste people’s human being](#) in harmony with surrounding natural originality and which is focused on people’s Save Lives and their integration into the future;

- [Transition to a new System of house keeping](#), which is a system of human orientation and a system of “Good”, which is based on aspiration towards imputation of social justice in zonal distribution of total manufactured goods and services, which provides guaranteed

protection from aggressive interference of personal parasitizing interests, imposed earlier from the outside by Britain-American-European minority in all its forms, being an atavism of the former destroying Construction of organized human being of “Civilization of Violence”.

- [Formation and imputation of new social arrangement's constructions](#) taking in mind particular qualities of functional and territorial empowerment, imputed to every community, and considering individual and collective merits achieved and recognized by society, which are aimed at personality and community perfection on the way of their civilized development according to way of Thinking orientation;

- [Circa formation, directed to transition of the Faith and Morality, raising them up to another level](#) and expressing complete harmony with perfective Mind's transformed level. [People will be able to be recreated like Homo Sapience](#), if awareness about irreversible demand to move to the next level of the world outlook will be revealed for them. The awareness, what had in its basis the status of Consciousness, known like a [Good-Manifestation](#), should be transferred to a new world outlook, having expired its beginning through the Consciousness status, known like a [God-Manifestation](#) in all its future spiritual and high moral everyday life being. It should be done through obtaining new cognition about verity of the “World Created”, through obtaining new cognition about true essence of the World Creating Beginnings, about people's true mission on the Earth and about, what The Creator is, and where His beginnings are.

[Taking into account the Russia's new functional empowerment](#), there is an additional preventive strategy for Russia:

- [Reconstruction of a legitimate and independent status previously lost by Russia and concerned new Financial System's governance](#) with autonomous and ensured capability of “Money Production”. Finding such equal right is oriented on aims of real elements imputing into a New World Financial System and on money functional shifting into creating and accompanying channel instead of former functions, consisted in instrument of violence.

Now, why is it so and not otherwise and why were indicated areas selected? First of all it is a System process. This process is not dependent of people's opinions and influence and is connected with new functional and geographical empowerment for zones, where the process of people's life preservation on the Mother Earth is more appropriate.

Only in this manner and without any violent influence against people from the side of new and true Guidance System they (the people) are given the opportunity to make their fateful choice:

- either automatic following unmanaged now, but the same path of the executive process, which lacks any support from the side of liquidated gunboat Control System with all consequences: human being condemned to death, destroyed society management, “spiritual

substance” degradation because its being is out of civilized framework but is inside of vicious and destroyed existence;

- or finding the true future, that means transition to another way of civilized development and entry into harmony with ongoing processes, directed on surrounding reality changes on the Earth, focused on recreation of former but true development of Civilization with Thinking orientation.

This explains all large-scaled processes in the whole complex of ongoing changes on the Earth with restoration character and aimed at recreation of a new guidance Construction of energies being in their true states. In harmony with those general and high level changes, some changes but of lower order should occur in the subsystem level, touching changes of organized human being’s Construction.

The “Preventive Strategies” are worked out and agreed with the System both according to true essence for people’s executive actions, and according to tact of event-driven timing.

Each of the above specified Doctrine’s provisions is an independent factor complex with its phenomena, actions and events, and on the same time has a capability and need of reciprocal integration and complementarities.

3.2. Actions

Actions, as a next after phenomena stage, are verified and mandatory Programs of preventive executive processes. By the way of their objectification The Event will be formed. Ultimately the beginning of transition to another way of Civilization development will take place. Actions are represented by Preventive Strategies, as follow:

3.2.1 Preventive Strategy in financial sphere of Russia

3.2.1.1 The target orientation:

Reconstruction of a legitimate and independent status, previously lost by Russia and concerned new Financial System’s governance with autonomous and ensured capability of “Money Production”. Finding such equal right is oriented on aims of real elements imputing into a New World Financial System and on money functional shifting into creating and accompanying channel instead of former functions consisted in instrument of violence.

3.2.1.2. The Conceptual justification:

The Russian Financial System, like a guidance system, aimed at accounting and reporting in sphere of money production and preservation of previously accumulated real values of society in whole, has lost its status of state independence and autonomy to govern itself in the scale of global system. It happened in April of 1914. No matter, how paradoxical it may be, but it is so

that. According to historical milestones fact, which is out of publicity, it does not need any additional substantiation, and it is from one side. From the other side, to whom do we need to prove? Do we have to do it to those, who had imputed such system and kept it from the outside in strict framework of external violence and counteracted to any attempt in arrangement and improvement of Russian financial system? It is the fact, that two-tier Financial system of the socialist social order, introduced in the USSR in 30-th years of the last century, had only some limited geographic framework of isolated autonomy within the borders of building socialism in one separate country (the USSR), and [it was not associated with the money production](#) on the scale of global financial system, created at the time. Until now, the [ruble](#), whatever it was in fact of its valuable status and form, either during different periods of the Communist Civilization type real-life, or in Russia, captured and sold by liberals, [since that distant time, both The Ruble and The Russia by itself they are not involved into the process of money production by all their value definition and price expression](#) on the scale of the global World Financial System.

[Russia, out of Her will like a state and out of the Will of her multinational people, who is a unique right owner and law enforcement, concerning all historically acquired and produced values, is an object of using during a hundred years \(April 1914 – April 2014\).](#) Russia is used like an object of some ethno-geographical “value” with all her natural resources and manufactured values. Russia is applied in form of value-conditional and unconditional turned substitute, which is used by external elements and institutes of the World Financial System for money production, aimed at personal hoarding (mainly of external character and eroded by financial clans). Especially now. In fact, so called “liberal monetization of Russia”, it is a system imputed by liberals through nowadays “ruble, substrate of which is the American dollar, but IT IS NOT any participation in money production, because all the essence of imputed provisions and practical activity in sphere of finances and reproduction of goods and services in Russia are focused on filling up of dollar by real value and ruble has nothing common with it!

[Russia does not have her own money, because the present “Ticket of nonexistent Bank of Russia” it’s a hidden form of uncertain “dollar”. And that is an imposed from the outside administrative mystery, imputed by domestic liberal democrats after liquidation of Russia and Communist type of Civilization both with its previous methodology of values without creation of new one in replacement!!!!](#)

The established negative circs and factors, which have being kept Russia in such position of dependence from so distant time, they were reflected by social scientists and political ostiaries in various degree of falsehood or verity during all this period of time. “The scientific and secular informational essence” expounded by them was dependent by itself of ongoing

features of software guidance, carried out by gunboat System of the time. All their judgments were positioned in line with the situation, which was predetermined by objectification of current real event-driven processes, by realities of executive actions in the framework of quasi “internal and foreign policy”. The System and Conceptual software control was imputed through targeted and executive capability of such composition of individuals, involved into power structures, who possesses necessary brain genotype for adequate actions. Only individuals and groups with necessary capabilities were “extended” in their career. They were reclaimed by the program of general event-driven chrono-process and thus directly affected the character of information set out into the ether.

In any case, even in the style of detective stories, which store till now “some deepest secrets” with hints of sacred nature or by any other forms of mystery, organized and hidden by various participation degree of different clan and tribal groups and control organizations with various influence scale, but the fact is as follow: [the Financial System of Russia is absolutely dependent now](#). Thus by now the System is deprived of control status of “Money Production” (please don’t confuse with the process of money printing. It is piece of paper or an unfair financial ether, filled by virtual electronic emptily and decorated into formalized accounting, which is controlled from the outside through some private structure in form of Central Bank of Russian Federation).

Only on a short period from 1929 to 1962 the Soviet Union’s Financial System had some kind of independence of “money production”, but it was a limited independence of nominal and local character. In this period a two-tier money turnover system was introduced: for non- cash and for cash. The system was under tightly control of the authorities and the first type of money was emitted practically in required amount which was necessary for adapted demand of planned economy, and this money was not dependent of an external “world” influence. But when the state power in the Soviet Union was captured by “komsomol reformers” in face of L.I. Brezhnev and his group, by the way, it was someone Semychastniy (formally from KGB, but in reality he was a secret agent of clandestinely saved Komintern), who provided to Brezhnev the way to power, everything began going by the same way of finished dependence and servitude to global financial institutes, people’s values withdrawal outside homeland was continued.

Все «литературно-драматические сюжеты» на эту тему, хлынувшие в эфир с различными паразитирующими, политическими или разрушающими целями за последние 20 лет, реального интереса не представляют, поскольку большая часть из них легендирована и является ложью заговорщиков. All of the “literary and dramatic stories” on this topic, rushed out into the ether during last 20 years, pursuing various parasitizing, political and destroying goals, all of them are out of the serious interest, because the most part of them is

a legend and lie of conspirators. All imputed false stories about the essence of current financial system of Russia are not true and are outside of real and true causal nature. A fortiori, by this reason all these stories can not be used as a supporting pad and taken as a base for judgments and working out of conceptual level strategies, especially at this time of transition to higher level of executive processes (started 2013.10.25).

All the factorial information basis regarding hidden clan structure of Britain-American-European money production, which in a certain extent relies on evaluative draws substitute of Russia (but without participation of Russia), is acceptable only in plans of its practical consideration in establishment of independent preventive steps, aimed at reducing of its effective contrary activity and localization of its existence like an atavism, or its using like a startup for money production, but in interests of Russia now. There are a lot of vestigial but influencing elements, belonged to old leaving construction of the World Financial System, in Russia now. All these elements not only hinder the ongoing process of structural transition towards imputing new elements into the Construction of organized human being, but aggressively prevent their outflowing, creating some kind of financial vacuum for basic part of production sphere, arranging uncontrollable funds mass emigration, tearing down any attempts to resolve social problems for basic ethnic part of the society, making artificial lack of control in price formation instead of advertised usefulness of market price competition and more.

There is no market economy in the world. All what exists is a literary mutated documentary delirium, remote from the reality and hidden by false chrematistics instead of real economy. So, it is a narrowly directed conspiracy, arranged by internal and external swindlers and tightly focused on making money at any cost in the framework of greedy profiteering and uncontrolled (from side of society) exploitation of some part of external money production, relied on violence and social parasitism over own people on the basis of illegal make use of real evaluative draws substitute in personal interests.

Moreover, a limited group of liberal democrats, who broke through to the level of control, is using the status of Russia's isolation from money production and Russian people's position of excommunication from his lawful right to apply and use his own evaluative draws substitute. This group has imputed in the all territory of Russia one the main targets of Financial Fascism, brought from outside, namely as follow: the existing industrial and another capital of the all reproduction sphere should be excluded by maximum from this capital's money service. Using such fragrant violation and destruction of any economy basics and laws, the liberals, who are under external control, openly rushed to elimination of vital foundations of Russia, namely as follow: the effect of financial colonization from outside (through ruble-dollar) has been mainly achieved; any possibility to make an independent choice in ways and temps of own reproduction

has been excluded; functions of the world disfranchised raw materials donor has been imputed. It means that Russia has got the functions of the evaluative draws substitute's generator without right of any participation in the substitute's treatment in the process of money production; any meaning of people's existence in Russia has been decisively liquidated. The will and unity of Russian multinational people, like a previously developing and unified society, has been broken down. A lot of other vital country foundations have been destroyed too.

All particular qualities of the World Financial System presently arranged have led this System to the resulting state, as follow: it is a derivative handmade Construction, aimed at making a control over involved financial executors and groups of them. This Construction was made under dictate influence from the old gunboat Control System, which predetermined before all basics and beginnings of the social consciousness, covering all spheres of people's organized human being via imputed elements of mandatory social violence and parasitism. And this System was imposed for Russia and for other world like groundwork for introduction of Financial Fascism. There is a main system approach of all judgments, connected with working out of a Preventive Strategy concerning financial sphere, in this definition.

What are fundamental conceptual factors, remained from the arranged old Construction of the World Financial System, which have automatically decreasing influences and which should be taken into account in working out a Preventive Strategy? They are as follow:

- attempts, directed to preserve earlier acquired possibilities to hold some conditional sole right, given from "the outside" (from the old gunboat System through program "Brain genotypes development"), of the world money production, playing the role of a certain Control Center, imposed to the world, continue being. This Center tries to control financial violence in favor of limited dedicated individuals groups, represented by particular "historical clans" and by some financial administrative and power organizations, especially established for that;

- inevitable graduated density reduction of energy informational maintenance, touching former executors, carried out from the side of old control complexes, objects and servers, is taking place. Unconditional demonstration of growing control lack and destructive chaos in Britain-American-European sphere of money production is taking place. Uselessness of any taken administrative measures with the aim to restore the same effectiveness of the world money control is taking place;

- gradual reduction of effective significance in using rights, captured through administrative violence, to possess "conditionally evaluated draws substitute" is taking place. This possession, as value groundwork for Britain-American-European money production arrangement, excluding any social justice in all existent fundamental principles of the World

social Constructions and consisting components of modern human society, like some atavism of vicious past, is loosing its significance.

Taking into account the above Conceptual reasoning, influencing factors, as well as arranged to date objective circumstances in changing reality, associated with giving new functionality to Russia in the emerging structure of a new World Order in line with harmony executive actions regarding the tact of coming up event-driven timing, [we can see with our own eyes how true historical verity and justice is going out. This verity is: only Russia can be and able to be “The Beginning of The Beginnings”](#) in the mission, aimed at imputing primary new strategic basis and basic elements in the emerging future World Financial System. There are not more any affective advisers from the West for Russia now. Namely Russia cuts some nodal stopper of the whole accumulated hisTORical injustice around the world, relied on the century-old parasitism and violence of Britain-American-European minority.

In today world Construction of people’s organized human being, relied on basis of violence and monetarist aggressive-destructive arrangement within framework of imputed Financial Fascism, there will not be a priory either freedom in expression of the will, or creative cohabitation. In such conditions the whole process of vital thoughts and life aspirations of people’s majority is forcibly driven within the framework of individual and groups’ interests and thoughts, directed on self-survival, elimination of community and meaning of existence at both international and national levels, destruction of any fundamentals of Good and creative development gift bestowed upon people.

Until April of 2014 Russia has to make primary preparations and begin active executive actions right after hundredth anniversary of anti-Russian injustice beginning, related to financial sphere. Russia has to relieve consequences of the Financial Fascism, imputed for her from the outside.

[3.2.1.3 The Program of step by step actions on realization of “Preventive Strategy in financial sphere of Russia”.](#)

The Program of step by step preventive actions, is an element of Target’s Vector, aimed by its realization at necessary future Event, and provides [Conceptual executive directions](#), as follow:

- [Putting into operation of the “Silver Ruble”](#) like a currency of external treatment, provided by a real evaluative draws substitute of Russian accesory;
- [Introduction of a new two-tier System of evaluative draws substitute for external and internal treatment](#) with the aim to reconstruct the money production process with participation of Russia;

- Introduction of a new System for saving up and keeping of nationwide values through establishment of “Russian State Treasury” and “State Bank of Russia”;
- Frontier (Provincial) Centers of Financial and Evaluative Bifurcation (CFEB) forming like a stimulatory regulator of financial, foreign trade and economic relations of Russia within the system of changed external relations and in the framework of a New World Order;
- Innovative and technological support with the aim to improve Governance, to introduce elements of a new Economic System in field of reproduction and in social sphere of humanitarian orientation in CFEB and in adjoining regions of Russia and abroad.

Every Conceptual Executive Direction is a separate software vector complex of verified and reasonable actions and according to its foundation, as well according to its results, is on the same time mutually integrated and interdependent. For this reason there can not be any question about non-performance or improper performance of any executive actions, because all of them are nothing but handmade mechanism of the Event’s future formation and follow it transition beginning to another way of civilized development.

The First Conceptual executive direction:

Putting into operation of the “Silver Ruble” provided by a real evaluative draws substitute of Russian accessory in form of certified banking silver (for Transition period);

This direction has a special role not only in financial field’s Preventive strategy realization, but also in realization of all other Preventive strategies. The first executive direction is predetermined by the role of active and participant status of Russia in start beginning of global changes of all general chrono-processes ongoing in the planet in line with transition to another way of civilized development without any violence in its basic cost!

The fact of realization of this emerged Conceptual direction by all its decisive significance is responsible for very important double-natured function: to be the basic foundation in changes beginning of the whole essence in nowadays impasse everyday living world outlook, associated with formation of a new equitable social people’s cohabitation. The changing world outlook in practical terms allow to perceive and impute some essentially important elements into the most spheres of a new organized people’s human being in Russia, to give a reasonable causal origin to start the launch of Russia’s renaissance, to integrate all changes ongoing in Russia and abroad, thus indicating and setting up by its activity a new Vector of unconditionally necessary changes as Beginning of the Beginnings in the process of transition to another way of civilized development.

By practical realization of the first executive direction Russia withdraws the present ruble of internal treatment (Bank of Russia ticket) from dominating influence. Russia get free from imputed from outside financial obligations in form of quitrent, imposed by “external” dollar, and on the same time Russia begins filling by the full potential value not dollar but newly introduced Silver ruble, moving to the side of values saving up in the State Treasury of Russia. Refocusing its powerful and fully guaranteed national possibilities of real evaluative filling towards strengthening of Russia’s financial state principle means that the new currency of external treatment isolates itself from traditionally imposed spraying of her values into the global World Financial System, i.e. in irreversible address and in favor of opposing clans’ financial structures. In a short time the “Silver Ruble” will find a granite firmament of sure consistency not only by the fact of its real evaluative draws substitute’s availability as a background of its internal and external treatment, but by the fact of obtaining [new functions of financial support](#) eliminating any violence and focusing its useful evaluative opportunities for constructive activity in Russia and abroad. These particular qualities of newly introduced currency will exclude its participation in ongoing reefficient egoism among other currencies and in a short time will give it irreversible world significance. In conditions of coming to end process of Capitalism Civilization’s type liquidation the issues of Russian financial external and internal security find special significance. It is associated with both objective factors, and artificial ones. The reason of artificial factors consists in escalating of requirements for financial support of capital from the side of money. Such escalating resulted in formation of almost financial vacuum around the capital.

It is impossible to solve the specified problems using traditional for “market economy” administrative measures, because by all its unreal and false essence some mandatory conditions of rigid dictatorship of “financial handcuffs” from the dollar were imposed, aspiring by its paper emptiness and inability in independent valuable filling, to solve these problems at the expense of other countries. It’s necessary to wait: the problems of financial security will aggravated with already made valuable destroying colonization of Russia, which reality was got up in form of Financial Fascism, and this colonization was made through enslaving implantation of power financially-investment technology of gunboat integration into all spheres of Russia’s being. It’s necessary to start in Russia immediately an active prosecution of violently imposed from the outside of economic outlook about certain foggy «Dollar Investment appeal» and do it in all spheres of domestic economic development. Russia more does not need entered “financial emptiness of dollar», with which according to quitrent obligations It should not only fill with the real value, but then also all to give, remaining with all negative consequences of that financial colonization.

Nowadays Russia has other plans: within the limits of occurring Conceptual changes of planetary scaled chrono-process these plans are expressed by event-driven requirement to destroy illusion about certain false-fair universal “Globalization”, imposed before, but only in favor of social parasitizing Britain-American-European minority. For Russia it is necessary to change the Vector of development: transition to another basis way of independent creative Russian being for the good of and for the love of lives preservation on the Earth together with other socially restrained people of the planet!

First of all, as the main fundamental basis for reviving Russia and her protective independence, it's necessary to exclude via strong-will and rigid way in a short space of time any neediness of external quitrent loan, which is artificially imposed from the outside by aggressively adjusted percenters in face of Institutes of the World Financial System. It will be “the Beginning of the Beginnings” on transition of Russia to another methodology of Value, i.e. it will be shown transition of public consciousness' states with basic foundation of “People of Price” on other basic foundation – “Human Being of Value”. After it Russian will not be already stopped and in it there will be her not only external force and power, but also security through finding her independence.

Moreover, transition to other value methodology will allow to change in a root a functional role of money in Russia from its last subject role, like a financial violence instrument, imputed from the outside, to a new creative role, accompanying and providing process of new civilized development with full reorientation of purposes of internal policy on satisfaction of human interests of the prevailing majority of the society. This important step of reorientation will provide in short terms an exception and destruction in people's public consciousness of any illusions and consequences, left as a historical negative memory, both from the Civilization of communist type, and from not existing Civilization of liberally-democratic parasitizing isolation of insignificant minority from the main part of the society.

Moreover, together with spent processes of constructive changes in sphere of society arrangement in interests of maintenance of true social justice and construction of system with mutual obligations “The State – The Citizen”, that reorientation of money's functions will exclude bases in everyday society being and will provide liquidation of all consequences from earlier imputed from the outside in Russia of all destructive Financial Fascism. It will give a basic change of the Will's state and people's efforts towards support Governance in the center and on the places concerning spent transformations, will recreate Belief in creating possibilities of the country on transfer of strategy of internal policy into human orientation towards all society, will rally earlier destroyed unanimity of multinational people, will provide appeasement of feelings and thoughts of multinational majority in questions of arisen dissociation of national

and geographical character. In people's public and individual Consciousness the sense of personal and public existence, as a sense of life, and it is that without what the reconstruction of Russia would be impossible, will be recreated.

All starting material and valuable expenses on introduction of currency of external treatment "Silver Ruble" excludes any financial loading of expenses on the present internal Russian Financial System and should be executed only at the expense of the possibilities, arranged on this day, on application before withdrawn (public and concealed) volumes of evaluative draws substitute with its partial involving in existing process of money production of the old World Financial System. It is an obligatory Deed of Historical justice and it should be executed irreversibly!

The time Plan-Schedule of actions of the First executive Conceptual direction: [Introduction of currency of external treatment "Silver Ruble"](#) is presented in Appendix No1.

The Second Conceptual executive direction:

[Introduction of a new two-tier System of evaluative draws substitute for external and internal treatment](#), providing a way of forming another System of House Keeping and reorientation of the country's base development to a human channel.

Causal justification:

The semantic meaning of the definition "substitute" in financial subjects of its application (substitutus) is substitution. In the course on money production at their formalized emission in paper or electronic form certain conditionally valuable substitute, equal in recognized digital calculus or in some established ratio to volume of money issued digital amount, is required. Thus, in conventional understanding of money exchange process the volume of paper money printing was usually proved. It has begun from the historical moment of the Anglican Church's consent to approve the act of money renting, proposed by percenters, prior to beginning of the "Marxist period", so, as a substitute was used basically coefficient value of gold (66% of money volume), silver (about 20%) and copper. With the onset of "machine age" the people's executive actions process has changed in a root the Target's Vector of phenomena, actions and events (see in details in the theory "Basics of Mankind Forming"). Annotation sequence of events was as that.

After well known K. Marx's "Capital" was issued, and it was a custom-made scientific work, paid by Rothschild family, the idea of so called "surplus value" has been entered into bases of economic concepts and judgments, which by itself does not mean anything in reality, except starting symbolization on a substantial scale conceived secret shift of future swindlers, connected with money production and imputing unconditional inevitability in obligatory using

this money in credit under percent (rent) for servicing of the production process! So in public consciousness of secular society of that time the beginning of the “machine age” has been symbolized.

And what is the true sacrament mystery, pledged in the “Marx’s great formula”, by which to these days automatically political and economic “pathologists” are admired? This mystery is a surplus value, which volume could be normalized in substantial scale in advance in economic and bank collusion for anticipation production of empty money, and from the side of percenters to achieve all forms and types of legitimacy in acknowledgement by a society as a turned substitute of additional conditional “values”, such as: real estate, works of art, raw material goods and anything you like, if only issued bank emptiness, especially in form of various derivatives (debentures, promissory notes, bills, etc.) was, as it thought in advance, filled by some conditional value, instead of or together with earlier recognized substitute’s variants and forms.

After coming into force of the program, aimed at restoration of post-war ruin, named “Plan of Marshal” (1946), as though at the initiative of the World Financial System (actually at the initiative of the USA Federal Reserve, as a private structure), the world economy in the frameworks of a “classical Marxist essence” more and more together with its majestic formula inviolability ceased to be economy as that. It has started to be got up in rigid frameworks of chrematistics, which essence is earning and accumulating money at any cost, as an end in itself, in interests of gaining power over the society. The money production process, basically in form of the international currency, it means USA dollar, has gone in extremely accruing rates, thus gold continued symbolizing conditionally former leading role of a substitute, but in reality in money production process a money paper emptiness in form of derivatives (in form of USA FED Bonds or in form of documentary Indonesian gold etc., it does not matter), hidden by private arrangements or clan plots was applied. More and more the contradiction between functions of capital and money, as the last should, but all to a lesser degree, serve the capital, became aggravated. With a view of the international currency exchange settlement from 1948.10.04 the Bretton-Wood System has been definitely entered (actually since 1944 was already formed the International Monetary Fund. It was a certain regulator of formal accounting and reporting for the first steps), which by the present time has exhausted its possibilities and powers, but there is still no more any other secret collusion of percenters and swindlers. The accepted positions of the international currency adjustment demanded more and more increasing gold’s volumes for calculations, especially from the party of the USA, for shown in their address of paper empty money, issued by them. As a result since 1971 the USA have refused their obligations of payment by gold for emitted dollars shown in their address! From this moment gold, as a great

bulk of the turned substitute applied for money production, has descended from the former advanced roles.

From this point on as the basic amount of the turned substitute in the course of money production some conditional and real commodity values, in their most part presented by hydrocarbons, began to be applied, together with secondary issued derivatives in various forms (nothing provided emptiness). Consequently it has resulted not only in complete warp of understanding of substitute's function role, but also has begun liquidation of any real control and management in course of money production and lead to a financial collapse, which was not slow to wait itself.

Such deadlock present position of the World Financial System using any administrative measures can not more be settled. Especially managerial process of the old Construction of executive actions is not more accompanied by the old gunboat System, due to its liquidation. It is required entering new executive participant forms and based forming elements for creation of a future Financial System's Construction.

The historical role in this process is given to Russia. One of those base elements is entering by Russia a new legitimate formalized state approach, connected with Two-Tier System of evaluative draws substitute with function of external and internal turnover on Transitive and two subsequent periods, concerning its directly recreated participation in the world money production. On termination of the specified periods substitute's new form will be prepared and replaced on more perfect, but inaccessible to people, nevertheless the Financial System's Construction entered by means of Russia with her direct functional participation at the world level, will be kept as one of elements of a common Construction of people's organized human being within limits of new model of the World Order.

Realization of the Conceptual executive direction

In what does that new legitimate formalized state approach to forming another system of evaluative draws substitute consist? What measures of the state administrative character from Russia are necessary for undertaking on this point of innovation?

The State has to introduce a **new Two-Tier System of evaluative draws substitute**, namely it should be other System of Stacking (accounting and reporting) with division of functions of external and internal turnover:

- Functions of the external turnover substitute are assigned on the banking silver, framed with special unconditional obligations, entered by the state according to its physical condition as silver of bank identification and valuable certificated status, corresponding to its in objective and

form registration according to recognizes standards or according to again entered rates, such as weight or other parameters, established by the Russian State Treasury.

All commodity valuable amounts of goods with natural origin (natural resources) appear public value of the whole people. The unique right to order it belongs to the State on behalf of the people, giving possibility to apply it for reproduction of goods and services to state and private institutions on the terms of compensatory valuable indemnity towards the state possession.

All foreign trade operations with export of any commodity, including the last substitute in form of hydrocarbons, should be arranged in public (not private) value and have to pass through valuable expression and support only via Silver Ruble, as a price regulator of Russian foreign and internal policy, taking into account a conjuncture of external demand and consumption. Legal servicing of the trading parties should be performed and registered through the CFEB, including allowing and procedure aspects of customs and state control services and support.

The main keeper and operator on behalf of the state, as a lawful and right manager of public values on evaluative substitute's application and saving, is the Russia State Treasury.

The main keeper and operator on behalf of the state concerning currency of external turnover "Silver Ruble" for all external and internal clients in the territory of Russia is the State bank of Russia, having representations in all CFEB. Only the State Bank of Russia is allocated by the right to establish a coefficient ratio to other recognized external currencies at realization with them of exchange financial operations or servicing trader operations.

With the aim to provide aspects of external security Russia independently and objectively determines and forms a real valuable ration of the external trading balance sheet concerning own external turned substitute, establishes and determines coefficient ratios of value concerning other legitimate currencies of external turnover on the basis of real value regarding their corresponding turned substitutes.

All exchanged operations with other currencies are performed only by the State Bank of Russia. The State Bank of Russia at determination and approving of coefficient ratios assumes as a basis a real value of each substitute, laid under any other currency, but completely excludes former expression of money price at imposed from the outside of liberal conditions of their sales. Russia excludes further money sale and purchasing, meeting conditions of equivalent exchange.

On all territory of Russia, except territories of CFEB appointed by the state, application of any currency of external turnover is forbidden at fulfillment of internal commodity trading operations, including services. For Russian organizations and citizens needs of currency external application, the currency of eternal turnover acquisition is realized through the State Bank of Russia and according to corresponding state regulatory and legal frameworks.

- Functions of valuable substitute of internal turnover are assigned to hydrocarbons and electric power.

Hydrocarbons and electric power, as they received *functions of a valuable substitute of internal treatment*, should be isolated from quitrent loading concerning former price and other external dependence, and the money production process with such imputed new functions ceases to be a field for extraction from part of any external and internal swindlers and to them enjoined. The state undertakes on functions of valuable expression to that turnover substitute and by this measure gives a manageable character to internal general price policy. It will permit to clear in a root an economic platform of Russia from destroying spontaneous liberalism and cause conditions of reproduction sphere and building a new System of House Keeping, eradicating all destructive consequences of imposed from the outside liberalism as that, i.e. larceny and plunder of Russia!

The state, to which all people in their face have transferred the right to apply their values, releases manufactures of that substitute from the most part of artificially imposed tax obligations and unauthorized additional corruption increases to the price, accepts loading of its export, as it is any other goods, on itself, and pays to manufacturer for it according to established internal prices. This act will essentially change in a positive way the settlement of existing problems, connected with fast public values accumulation and will cause establishment of a control over expenses and application, will change budgetary possibilities of the country towards essential increasing (contrary to Britain-American-European enrichment), aimed at human reorientation of all internal social policy, will essentially protect from destructive officialdom larceny, will give higher level of acknowledgement from people to the country leaders, will generate other Belief in the future, i.e. will give some creative conciliar character to all multinational society and to many other things.

Pursuing internal state policy on the basis of imputation of a manageable system of price adjustment and on the basis of evaluative draws substitute of internal treatment will allow to destroy in a short period the financial vacuum, created from the outside, around a based part of production sphere and around its capital, both in state, and in private sector. It will provide liquidation of opposition between capital and money. The state will understand necessity and receive possibilities to protect sphere of mass small and average business from suffocating financial violence and parasitism, organized and steadily generated against them, by uncontrollable and destroying bank liberalism. As consequence, it, undoubtedly, will give to destroyed earlier labor participation of the population an accruing mass character on their involving in reproduction process through state and private sector, will give them creative public function and will help to lead out deprived people from forcedly tired out condition of an

individual self-survival, to conciliar utility of local and federal consolidation in working. Parasitizing banks should be liquidated like past atavism. Bank money supporting of active participation in forming of creative industrial capital and capital of average and small business – is an indispensable condition, established by the State, of further existence of any bank.

This is a unique and the most reasonable way of Russia's leading out of deadlock of all being's types and spheres and not just from accruing problems in economy, as it is one of the bearing bases to start executive process towards forming a new System of Housekeeping, capable to transfer key economic goods and services reproduction branches on rails of human orientation, on satisfaction of vital needs of all multinational people of Russia.

In this limits of importance [forming a new Two-Tier System's evaluative draws substitute of external and internal treatment](#) is that and unique reasonable way, which will allow Russia to be Beginning of the Beginnings on transition to other more progressive way of civilized development – Humankind.

For primary expenses on creation of necessary volumes of silver as a valuable substitute, aimed at maintenance of currency of the external treatment's introduction, it is necessary to exclude expenses of the state budgetary funds, using other external possibilities and financing sources, which conditions are presented in the offered Plan-Schedule.

The time Plan-Schedule of actions of the Second executive Conceptual direction with aim to [Introduce a new Two-Tier System's evaluative substitute of external and internal treatment](#) is presented in Appendix No2.

The Third Conceptual executive direction:

[Introduction of a new Russian System of nationwide values saving and keeping](#) through establishment of "Russian State Treasury" and "State Bank of Russia".

Nowadays existing Construction of Russian financial control System, including subordinate position of Federal Treasure to Ministry of Finance and established by legislation an extra state position and very special legal status of the private bank with the name of "Central Bank of the Russian Federation", which on collusion of liberals has undertaken a number of functions of the State regulation and management of Russian financial sphere, all it was available for conditions of implementation from the outside of liberal democratic transformations of Russia after communist type Civilization's liquidation.

All it, as well as many other things, was made not for benefit of the main historical right owner of all and All in the territory of Russia – who is her multinational people. It was made with other purposes – in advantage and favor of the limited and parasitizing minority, i.e. the

group of liberal democrats, who realized through their violent and private actions, has implemented Triune Fascism through the state violence over prevailing majority with support from the outside, as an atavism of the old way of civilized development. This atavism should be recognized categorically because forming event-driven program processes will bring annalistic corrections into executive objectification, related to those, who does not still recognize it for any reasons of personal character.

In interests of historical justice, as one of the important causal conditions on forming future actions and events, associated with occurring changes and transition to other way of civilized development, doubtless correction in Russian financial control system's Construction is required and caused.

Main elements of such correction include, as follow: The Russian State Treasury and The State Bank of Russia establishment. Undoubtedly, it will lead to changes in functional arrangements of Russian Ministry of Finance, to changes in its structural construction and to other changes, but it is some reorganizing aspects of subsequent plan of reorganization of the Government and we miss it presently.

[The Russian State Treasury formation](#) is, by its importance, an act of event-driven level and shows the fact of historical justice reconstruction on restoration of true right of ownership by all values of nature origin granted to people on all territory of the country, participation in management and control from his side behind their application, aimed at establishment of social and other found justice and participation in useful and economical advisability of their application for the sake of all equal to himself, for secured conditions provision of person's creating perfection and society's perfection as a whole.

The Russian State Treasury is a state institute, organizing nationwide values' saving and keeping, safely warranting absence of prodigal encroachments of internal and external character, the values reasonable application in benefit of all society. Objectivity of taken responsible decisions and also independence in functions execution from officialdom influence or opposition, are guaranteed by Laws of Russia.

Unlike nowadays existing, the new Russian State Treasury is an independent state body of management and is not accountable to the Ministry of Finance. Its main functions are: to organize production and accounting of a valuable substitute of the external treatment (banking silver) and its state keeping; organization of accounting of a valuable substitute of the internal treatment; emission and accounting of monetary secure notes of the internal treatment and organization of their keeping and application through the State Bank of Russia; execution of money emission functions on behalf of the people and under instructions of the State.

Secondary functions are defined by additional Instructions and Regulations.

The State Bank of Russia formation shows the act of reconstruction of the autonomous state control and management over independent and objective volume of emitted currency of external treatment “Silver Ruble” and bank notes of internal treatment, provided by volume of evaluative draws substitute, excluding any gunboat interference and parasitizing encumbrance from external influence of destroying World Financial System, realizing from and liquidating consequences of imputed Financial Fascism.

The State bank of Russia assumes all functions of state regulation, which have been delegated earlier to the private Central Bank of Russia. It shows the main Bank of the first tier, the monetary institute of the Russian Federation, developing and implementing together with Government of Russia a unified state credit policy, allocated with special powers, in particular, with activity adjustment of all other banks in the territory of the country. The State Bank of Russia, carrying out a role of main coordinating and regulating body behind the all credit system of the country, acts like an participant institute of economic management, focusing its activity on guaranteed money servicing to the state and private capital in interests of forming identically oriented on developing creative reproduction of goods and services, providing by its financial policy the society development vector, oriented on a human way. The State Bank of Russia supervises activity of credit organizations, gives out and withdraws licenses for realization of bank operations, and already credit organizations work with other legal entities and persons.

All rules and laws of functions execution of the State Bank of Russia are determined by the Constitution of Russia and by laws of Russian Federation.

The Fourth Conceptual executive direction:

Frontier (Provincial) Centers of Financial and Evaluative Bifurcation (CFEB) forming like a stimulatory regulator of financial, foreign trade and economic relations of Russia within the system of changed external relations and in the framework of a New World Order;

CFEB forming is the first practical step on establishment of foreign trade, economic, ideological, innovative and other actions from part of Russia in terms of formation of a new World Order. The mere existence of such Centers, especially of provincial location, will be the first demonstration act concerning changed role and functional arrangement of Russia in general construction of a new World Order, change of her effective significance within the common process of occurring changes of all surrounding reality on the planet, her exit from the former degraded bondage of a “raw appendage” and taking leading positions regarding orientation of all others on the way of transition to other sense and level of civilized development. It’s not pathos, in great degree it is a purpose.

The CFEB establishment is realized partially on the basis of former «Free Economic Zones» (FEZ), especially allocated for this role. These zones should be completely reoriented on their mission, general functions, local functions, taking into account particular qualities of geographical situation and traditionally developed labor and other craft, special legal regulations and obligations on the level of relations “The State – CFEB”, compulsion of introduction of new technologies of future, arrangement of local wasteless being and many other things.

Concerning changed destination

Earlier established Free Economic Zones (FEZ) had had a destination to promote the initiative activization of foreign companies in production of goods, services in trade and also in other types of activity in territory of Russia, meaning arrangement of dumping conditions on scale export of raw material goods. In such zones production and assemblage of various kinds of goods on the bases of foreign equipment, technologies and materials application with use of local electric power, raw materials and labor force could be organized, transferring all ecological problems on the territory of Russia. Let’s remind, that in foreign practice economic zones are, as a rule, small territorial enclaves with especially favorable mode for activity of foreign capital, poorly connected with local market and focused on export of goods at the price, essentially reduced of its cost value. Russia does not need more those FEZ, they are not only useful, but are playing negative, destroying role.

In view of Russia essential territorial scope and important geographical position, influencing in certain degree on forming a new World Order, what is the destination of CFEB?

CFEB are geographically temporarily isolated parts of Russian territory with entered particular treatment of a general and special legal status of citizens, state bodies of management, representations of Federal level, power and control state structures, intended for realization of their functions, delegated on behalf of the State:

- establishment of local Constructions with such social arrangement, which should take in mind particular qualities of geographical and functional vesting of every concrete zone for approbation of elements of a new social policy of the State, relying on human orientation of all people’s organized human being;

- to begin establishment of a Provincial Civilization Ring with the aim to fill unexplored Russian territories by an active function of creating life being through achievement of required level in forming necessary conditions, supporting all sphere of everyday dwelling with harmony with occurring process of changes. Establishment of local zones of frontier placing with autonomous system of other social management on the basis of own energetics with application of new super sophisticated technologies, which use renewable sources and don’t require

traditional raw materials, with reproduction of high innovative arrangement level, based on technologies of creative character. Provide beginning of the progressing perfection in civilized development of unexplored Russian territories, acting under the principle “From the Province – To Center”, and taking in mind illusion’s liquidation that Russia supposedly has territory excesses;

- to use CFEB like a contribution of Russia in giving trustee managing character over all forming new foreign trade and economic, ideological, innovative and other directions of external interaction with limitrophes in terms of the New World Order formation;

- through management of export-import valuable commodity and services flow’s balance sheet, provide planned positive dynamics concerning growth bifurcation of commodity values into value of turned substitute. At growth of export operations it’s necessary to provide volumes increased covering with application of own currency of external treatment “Silver Ruble”, and at growth of import operations it’s necessary to provide volumes increased covering with application of other external currency.

For implementation of each specified above destination for each concrete CFEB a legislative procedure is prepared and through Government Regulations are fixed specific detailed orientation regarding functions, proprietary destination, purpose and particular administrative legitimate field, i.e. all concrete aspects, regulating realization of CFEB development Program., are working out.

Realization of the given Conceptual executive direction by its positive results will essentially influence on course and temps concerning changes in civilized development of the all internal territory of Russia. On the other hand such untraditional, on the first sight, step of the internal policy will have an essential reflection in corrections of Russian defense and other doctrines, providing the task accomplishment of assiduous system approach to the forced application of nationwide values and in this question.

The Fifth Conceptual direction:

Innovative and technological support with the aim to improve Governance, to introduce elements of a new Economic System in field of reproduction and in social sphere of humanitarian orientation in CFEB and in adjoining regions of Russia and abroad.

Realization of the specified direction in limits of its vector innovative covering provides results mastering and implementation of Russian scientific and technological researches into practice according to sub directions, as follow:

- Electric power's finding through application of fuel-free technologies of energy reception and transmission from environment and also technologies application of cold plasma energy;
- Electric power's finding through technologies of renewable and non-raw material sources;
- Transferring of rail way, maritime, airlift and automobile transports into propulsion systems with application of non-fuel technologies;
- Processing of mining raw using technology of cold plasma;
- Ecological treatment of industrial, household and other drains of polluted water, agricultural lands and air in areas of industrial and urban pollution, approaching aggregative results of basic components of environment to the level of their nature origin or follow-fit application;
- Application if technologies of matter of electric and magnetic energies' conservation for creative and defensive purposes;
- Application of Russian technologies of information and cognitions reception, transmission, analysis and accumulation, aimed at guaranteed secure communication and management.

The Program's realization of specified Conceptual executive direction should be fulfilled and adjusted for each separate CFEB, accounting individual particular qualities: from functional arrangement to geographical and climate conditions.

Upon completion of the process innovation's mastering, it's necessary to provide in each separate zone measures, aimed at the process' step by step spreading in adjoining and more remote territories of Russia, thus the most part of expenses should be assigned to financial possibilities of each CFEB.

Reconstruction of earlier lost in Russia of the legitimate and independent status of Financial System management, possessing an autonomous and provided availability of "Money Production" not only can, but should become a program for all the country. Since the first steps of the program's realization all Russian citizens have to be focused on its main essence, perceive and understand it as a nationwide program purpose. Results of its realization in a short time will conceive positive fruitage in reconstruction of earlier destroyed people's Will as a unified multinational family!

General Director of RI CPS

B. Makov
